Code lists

- ✂ How do we handle code lists in the future:
- ✂ Used directly in programming.

Workflow and Business Processes

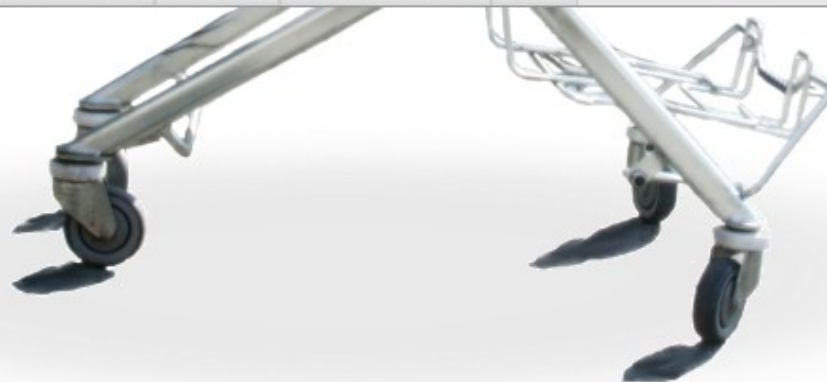

- ✂ How do we handle processes?
- ✂ How do we model?
- ✂ How do we use execution language?

Open Source software exchange

- ✂ The Danish National IT and Telecommunications Agency (NITA) under the Ministry of Science, Technology and Innovation has established and operates an Open Source software exchange, 'Softwarebørsen' (literally, 'The Software Exchange'), a public sector repository which gives public institutions a framework with all the necessary project management tools for sharing Open Source software.

Seneste blogindlæg

Velkommen til Softwarebørsen

Softwarebørsen er Videncenter for Softwares tilbud til it-beslutningstagere og udviklere i det offentlige Danmark.

Her finder du ressourcer til anskaffelse og udvikling af software, herunder open source-software målrettet den offentlige sektor.

Commercial dimension

- ✂ Open to commercial vendors who can offer additional services to the projects in 'Softwarebørsen' in competition with others and make a profit.
- ✂ And we support projects with up to 600.000 DKK

National web service (SOA) infrastructure

- ✂ National service-oriented infrastructure to support the reliable, secure and asynchronous exchange of business messages across heterogeneous networks within the public and private sectors. The infrastructure consists of a number of government controlled replicated UDDI registries and interoperability profiles

National open e-business framework

- ✂ In 2007 the NITA launched a national e-business framework 'NemHandel' (literally 'EasyBusiness'), based on a new national service-oriented infrastructure (described above) and utilizing state-of-the-art open standards

Open Source application for the exchange of e-business documents

- ✂ In conjunction with the establishment of the national e-business framework 'NemHandel', NITA has developed an Open Source 'NemHandel' application for the exchange of e-business documents, e.g. electronic invoices, via the internet. The Open Source application is freely available through the Open Source software exchange to public sector institutions, private businesses, and IT vendors who may incorporate the technology in their own commercial products.

About the CIP work

- WP1: eSignature
 - Use of any digital signature
- WP2: Virtual company dossier
 - Utilize company information already registered
- WP3: eCatalogues
 - Provide product information, descriptions and prices in electronic catalogues
- WP4: eOrdering
 - Allow any company or public sector institution to send, receive and respond to electronic orders
- WP5: eInvoicing
 - Allow any company or public sector institution to send, receive and respond to electronic invoices
- WP6: Project administration
 - Administrative aspects of the project
- WP7: Awareness, training and consensus building
 - Preparing non-consortium member states, solution providers, supplier industry (with particular focus on SME's) on taking project deliverables in to use
- WP8: Solutions architecture – design and validation
 - Design and validation of the common specifications and building blocks. Overall architecture for integration and interoperability.
